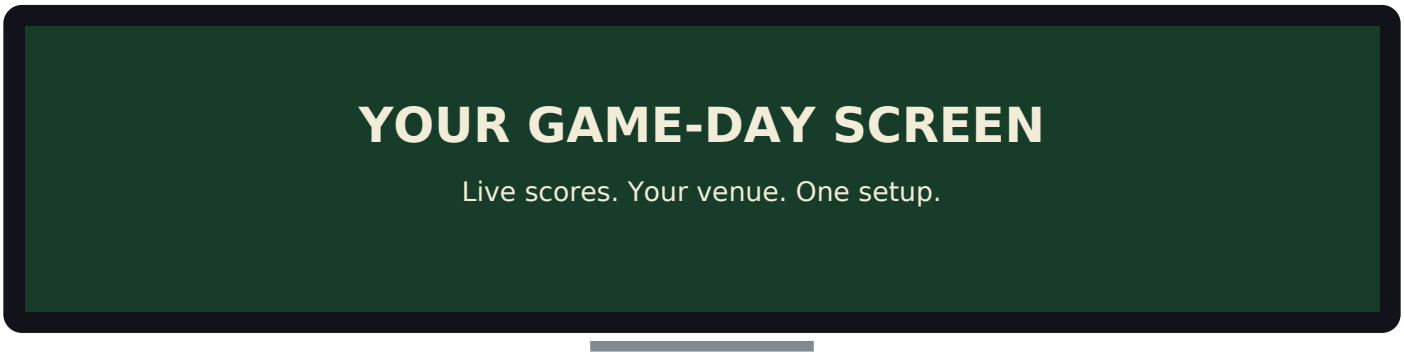
Commercial Setup Guide

For bars, restaurants, offices and other licensed business displays.



Get your first screen live

1 **Finish your account**
After payment, open your welcome email. Choose your password, or use your existing ScreenScore login.

2 **Connect and sign in**
Use a supported display browser or a computer connected by HDMI. QR Code sign-in can save typing on a TV.

3 **Choose what plays**
On the home screen pick **Single event** or **Build a board**, make your choices and press **LAUNCH**. Open the board's **Menu** for full screen.

4 **Save and check the room**
Save your grids and your own boards. Confirm the display stays awake and the text reads clearly from customer seating.

> **What ScreenScore displays**
> Live sports scores, statistics, standings and your own messages. ScreenScore does not stream game video or provide television broadcast rights.

Inside: Account & QR login 2 | Devices & screens 3 | Choosing what plays 4
Custom Grids 5 | Your own board 6 | Rotations & daily use 7 | Help & billing 8

Account setup & QR sign-in

Your business keeps control of its email, password and licensed displays.

1 **Open your welcome email**
After payment is confirmed, check the business contact inbox for **Welcome to ScreenScore**. Check spam/junk if it is missing.

2 **Finish the secure setup**
Use the setup link in the email. **New account:** choose and confirm your password. **Existing account:** keep your current login. ScreenScore does not email you a reusable password.

3 **Review your business account**
Confirm the licensed screens, locations and paid term. Choose **Open your ScreenScore displays**. Use your customer login on each licensed screen.

> **Link expired or already used?**
> The welcome setup link lasts **3 days** and can be used once. Open that page and choose **Email me a fresh setup link**, or email support@screenscore.tv. Keep passwords and setup links with your business team.

Sign in to a TV with your phone

1 **Start on the TV**
Open **screenscore.tv/login** in the TV or connected device's browser. Choose **QR Code**.

2 **Finish on your phone**
Scan the code with your phone camera. Sign in if prompted, then approve the TV shown on the phone. Use the same business account that holds the commercial license.

3 **Return to the display**
Wait for the TV to finish signing in, then choose your content. If the code expires, generate a fresh one on the TV. Email/password sign-in remains available.

For a forgotten password, use the reset option on ScreenScore sign-in. Nobody at ScreenScore or its partners receives your password.

Connect your screens

Choose a setup that matches your venue and the number of independently controlled displays.

SETUP	HOW TO USE IT
Computer or mini PC A practical permanent setup	Connect HDMI/DisplayPort to the TV. Select that input, open Chrome or Edge, sign in and enter fullscreen.
Fire TV / Firestick	Open the **Internet** app (Amazon Silk), visit screenscore.tv/home and sign in. Bookmark the page for staff. Use QR login if available.
Smart-TV browser	Open screenscore.tv/home in the TV's browser. Test its remote controls, fullscreen and sleep behavior. Browser capabilities vary by model.
Casting / mirroring	Use a compatible device and receiver. Chrome desktop casting, AirPlay or Android screen casting may be available. Follow the device-specific instructions at screenscore.tv/help.

Different content on several TVs

One computer: confirm it supports the required number of independent displays. Connect each output, choose **Extend** in display settings, then move a separate browser window to each TV. Set the content and fullscreen on each window.

One device per TV: sign in with the same business account on each licensed device, then choose that screen's content. Stay within the screen and location counts on your license.

> **An HDMI splitter repeats one picture**
> A basic splitter mirrors the same output to several TVs. Different scoreboards need independent computer display outputs or separate playback devices.

Apple / Roku: phone mirroring can leave side bars. A supported browser on the display device or a computer connected by HDMI gives more control over the TV layout. Apple TV and Roku need a compatible casting/mirroring route or another connected device for browser-based ScreenScore.

Choose what plays

Everything starts from the home screen on your TV or computer.

ON SCREEN	WHAT IT DOES
Single event	One game at a time, filling the screen. Pick the league, the game and a skin, then press **LAUNCH**.
Build a board	Grids and your own boards: **League grid**, **Rotating grids**, **Custom grid** or **Your own board**.
Menu (on a launched board)	Switch league, skin, day or football week, go **Full screen**, open **Your board**, or go **Back to home**. Press the Menu button, or M on a keyboard.
My boards	Reopen the grids and boards saved to your account, on any signed-in screen.
TV remote	Set up a screen from your phone: scan the code and your phone picks what plays on that screen.
Rotate icon	For a display mounted on its side. Turns ScreenScore to fit a vertical screen.

Sports you can choose

Pro leagues: MLB, NBA, NFL, NHL and WNBA.
NCAA: Football (FBS), Division I men's and women's basketball, baseball and softball.
Soccer: MLS, Liga MX, Premier League, La Liga and Bundesliga.
Golf: PGA, LPGA and LIV. **Racing:** Formula 1, NASCAR and INDYCAR.

> **Match the skin to the sport**
> Choices include Glass, Sleek, Vision, Monster, Big Board, Jumbotron, Courtside and CRT where supported. Choosing a game on a grid opens it full screen in the same look.

League schedules, standings formats and available statistics depend on the sport and data feed. Check the selected day, football week, race or tournament when the expected event is missing.

Build a Custom Grid

Combine games, teams and leagues on one screen, tile by tile.

1

Start the grid
On the home screen choose **Build a board**, then **Custom grid**. Pick **Widescreen** or **Vertical** and how many tiles you want.

2

Fill the tiles
Choose **My teams**, **Today's games**, **A league per tile** or **Start empty**. In the editor, change any tile's content and skin. A tile can also carry a scrolling ticker of players.

3

Launch and save
Press **Launch**. ScreenScore offers to save the grid: give it a recognizable name and it appears under **My boards** on every signed-in screen.

> **Make it easy for staff**
> Use clear names such as **Main Bar - Football** or **Patio - Mixed Sports**. After a change, check the actual display instead of relying only on the editing preview.

A whole league at a glance

Choose **Build a board**, then **League grid**, to show every game in one league on one screen. Pick the league and a skin, check the live preview and press **LAUNCH**. Choose any game on the grid to open it full screen.

Reading the room

Viewing distance: fewer tiles means bigger scores. Four to six tiles read well across a typical bar.
Vision: a high-contrast skin with larger, simpler information.
Clipped edges: check the TV's overscan or aspect setting.

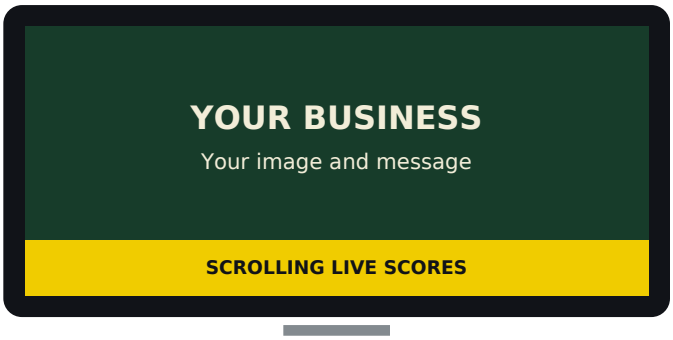
Saved grids and boards belong to your account. Full screen and browser behavior depend on the device, so check each TV after setup.

Your business + live scores

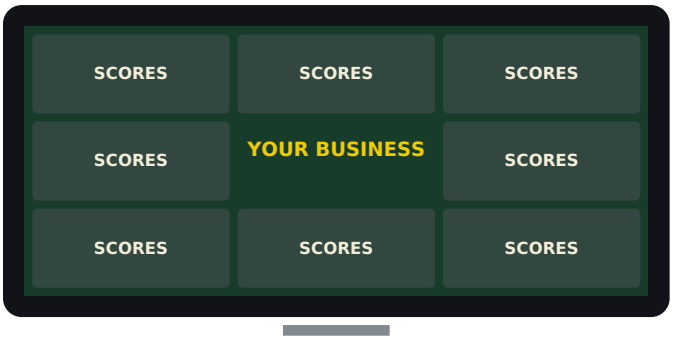
Use your own board for venue messages, specials, events and your own images.

On the home screen choose **Build a board**, then **Your own board**. The board editor opens: choose a board style, add your image and message, and use the live preview to position them. To change the board later, open the **Menu** and choose **Your board**.

Choose a presentation



SCORES TICKER
Your board stays large, with scrolling live scores beneath it.



SCORE FRAME
Your board sits in the center, surrounded by live score tiles.

Layout illustrations only. The exact board appearance follows your selected skin and content.

1. **Choose the scores**
   Select a supported league combination. Use **Favorites only** or **Live games only** when useful. A restrictive filter may leave no qualifying games.

2. **Tune the frame**
   For Score Frame, choose **4, 6 or 8 score tiles** and the rotation interval. Additional games rotate through those tiles while your business board stays in the center.

3. **Save and show**
   Give the board an easy-to-recognize name and choose **Save preset**, then **Show Board**. Saved boards and uploaded images follow your account to other signed-in screens. A board that is showing comes back by itself if the screen reloads.

Commercial license required: Scores Ticker and Score Frame need an active commercial license. If unavailable, check the account and paid term. Standard shows your board without the live scores around it.

Rotate leagues automatically

Let each league take a turn, so the screen always has something live.

1. **Pick the leagues**
   On the home screen choose **Build a board**, then **Rotating grids**. Choose two or more leagues.

2. **Pick the look**
   Use one skin for every league, or **Signature skins** to give each league its own look.

3. **Set the rotation**
   Choose full grids only, or each grid followed by its games one at a time. Decide whether to include standings, how long each league stays on screen, and whether to show **live games only**.

4. **Launch and save**
   Check the live preview and press **LAUNCH**. Save the rotation to find it again under **My boards**.

> **A useful venue setup**
> Run a rotation on the TVs near the bar and your own board with a **Score Frame** by the entrance: guests see your specials, and scores stay on screen the whole time.

Before you leave a display unattended

At opening: confirm the correct account, content, day or week and full-screen layout. Refresh if necessary. Check internet access and the TV input.

Power settings: adjust sleep, screen saver and automatic power-off options on both the playback device and TV. Full screen alone does not guarantee that a device stays awake.

Final check: test the actual setup for a full operating shift. Confirm messages fit, images load, remote controls work and the display recovers after a refresh.

Daily sports and football weeks follow the selected schedule rules. Race or tournament availability differs from a two-team game grid. See screenscore.tv/guides if a selection behaves differently on a device.

Help, billing & support

Use these checks first, then contact ScreenScore if the issue continues.

IF YOU SEE...	TRY THIS
Missing welcome email	Check the business contact address and spam/junk. Email support@screenscore.tv for a fresh one; use the newest setup link.
Commercial options unavailable	Confirm you are using the customer's licensed account, payment is complete and the commercial term is active. Refresh or sign in again.
No games / wrong events	Open the Menu and check the league and the day, week, race or tournament, and any live-only setting. Confirm the internet connection and refresh.
Black bars or clipped edges	Check full screen and the TV's overscan/aspect ratio. Phone mirroring may retain the phone's proportions.
TV sleeps / casting drops	Check both devices' power settings and the network. For a permanent installation, consider HDMI from a computer or a supported browser on the display device.

Manage your commercial license

Your business account and checkout confirmation show licensed screens/locations, price and monthly or annual renewals. Choose **Stop future renewals** in the business account to stop renewals. Access continues through the paid term; stopping renewals does not issue a refund.

Included support

First 30 days: setup help by email, phone or video call.
Ongoing: up to 2 support sessions per license-year, roughly 15 minutes each as a general guideline. If more time is needed, we will discuss next steps.
Extended/custom help: longer sessions, unusual setups and network/hardware issues can be arranged separately.
